ABSTRACT OF THE DISCLOSURE

An object of the present invention is to provide a wireless communication print server 25 that makes a printer 20 connected the wireless communication print server 25 unavailable if a parameter 50 is in the initial state. When the wireless communication print server 25 receives a print request, determines whether or not the parameter 50 is in the initial state, and then rejects the print request if the parameter 50 is in the initial state. If the parameter 50 that has been changed by a change unit 60 is not in the initial state, the wireless communication print server makes the printer 20 connected with the wireless communication print server 25 available.
